
openapi-type documentation

Release 0.1.0

Maxim Avanov

Jun 19, 2022

CONTENTS

1	Quickstart Guide	3
1.1	Installation	3
1.2	Using CLI tool	3
2	Indices and tables	5

openapi-type provides the [OpenAPI Specification](#) as a Python type.

```
pip install openapi-type
```

```
from openapi_type import OpenAPI, parse_spec, serialize_spec

spec: OpenAPI = parse_spec({
    "your OpenAPI Spec as Python dictionary": "will be parsed into a proper Python type"
})
assert parse_spec(serialize_spec(spec)) == spec
```

QUICKSTART GUIDE

1.1 Installation

```
$ pip install openapi-type
```

1.2 Using CLI tool

Once installed, `openapi-type` provides you with a CLI tool that allows you to generate a Python client derived from a JSON/YAML specification.

For example, try the following snippet in your shell:

```
$ curl -s https://<specs-location> | openapi-type gen -o <new-client-dir>
```

INDICES AND TABLES

- `genindex`
- `modindex`
- `search`
